

Dr. TOMASZ KUDER

Founder of KUDER ENVIRO-ISOTOPES LLC

Research Scientist at University of Oklahoma, Norman

ENVIRONMENTAL AND ISOTOPE CHEMISTRY; METHODOLOGIES OF COMPOUND-SPECIFIC ISOTOPE ANALYSIS (CSIA); APPLICATIONS OF CSIA IN THE ASSESSMENT OF CONTAMINATED SITES.

Professional highlights

1. Development of innovative CSIA methods for environmental VOCs. These methods established the laboratory of the U. Oklahoma as a provider of CSIA services since early 2000s.
2. Applications of CSIA in the studies of contaminant attenuation – including first demonstration of in-situ degradation of MtBE (Kolhatkar et al., 2002; Kuder et al., 2005), and studies of biotic and abiotic degradation of halogenated compounds such as chlorinated ethenes and 1,2-dibromoethane.
3. Application of CSIA for VOCs from vapor intrusion sites. This relatively novel field of CSIA applications draws on analytical methods developed at U. Oklahoma specifically for samples of indoor air VOCs.
